Router fence for table saw plans

06-15-2018, MENINA AND 16011:49 AM sola35;1 Hey, everyone. I know that there is a bit of a divided house about the use of your table seen as a router table, but that is the direction I a as I put my shop tool shopping list together. I'm probably going with a 3 HP Sawstop Professional, but still have to decide on a 36th Place vs. 52a. I'm not thinking of making a ton of good sheet breaks in the saw as I have a good track saw and the room, so this is not really the driving factor. Next, I'm not very clear about how the router fences work (add) with a table saw system. Are they all different and all require some kind of modification? Do they depend on the cast iron table you select? I could simply go with the whole SawStop system, now that they have expanded into the router world (cast inserts, elevators, fences, etc.), SawStop tracks. What are your experiences/observations? I am continuing to investigate this question, but I thought I could also learn from the experience of each of you. Thank you, Dean Google Sponsor for \$1k+ depending on what you want to do. If I were to go backA router in a wing of table saw, he would only be using a cast iron wing designed for him. Something like a bench dog table saw, he would only be using a cast iron wing designed for him. Something like a bench dog table saw, he would only be using a cast iron wing uses its own around which does not require any changes to your top rails table. rails, sà £ © m Tamba the vedaçà systems Incra £ £ What sane incrAveis the pieces of mAjquinas. They Tamba © m running the gamut to provide a stand alone router, to a fully integrated package that replaces your existing vedaA§A £ OEM. SOUND the systems £ "Cadillac", measured by any Padra the £. If you have the room, I would take 52 "over 36". Do £ for cutting the sheet products, but as well © m to provide support for longer pieces of material, while performing crosses. I use a curler, £ Enta the US in the £ have remained on what really is the estÃ; lÃ; today for router tables. I'm sure others will give you a ton of the £ My Information. The last £ ediçà of Mike Cutler; 06-15-2018 at 24:21 PM. "The first thing you need to know, probably the last thing that serÃ; aprenderÃ;." (Unknown) 06-15-2018, the Baa160; 4:36 PMJos35; 3 Thanks for the reply, Mike. cast iron wings extension of the £ cà £ the bank as well as the SawStop offer. Both seem to be of good quality. If I go to the table SawStop, 52ª Amendment Ahem, I really would like to replace all £ porçà the wooden table for cast iron elements. I hope to be going to território \$ 1k + £ betweenthe extension of the cast, elevator, fence and pó collection box. Tamba © m going to buy a router engine. This à © else that will do more investigações ... The SawStop has an offer with Variable speed motor and a button £ speed control of externally mounted and off. Why not give the £-Only h \tilde{A}_i long enough to find any cratic or people are able to cope well with the manufacturer ... ser \tilde{A}_i the combination for externally mounted and off. Why not give the £-Only h \tilde{A}_i long enough to find any cratic or people are able to cope well with the manufacturer ... ser \tilde{A}_i the combination for externally mounted and off. extent. I think I need-Only continue to research which system elements sà £ the most important to me and try to build from olny. I will look again at what Incra I believe that they have their versions of Jess in Master Lift II that I could prefer because of the magnetically kept anons. I'll look more closely to see what they offer for fences and if anything on the cast table cast Remember if I saw them in Incra. I definitely am inclined to the table 52th places, it is best to have it and do not really need it ... You know .. Finally, a stand-alone routing table is not completely out of issue The. I just thought that, with the investment at a high quality table and saw, I should take advantage and integrate the router into it. With the type of projects I hope to be doing, I do not think I'll have to do a full format ... but who knows? Thank you again for the entrance. I'll go back to study and shop. Dean 06-15-2018, a. Mensse1606: 29 pm8035; 4 "I believe they have your Jess version in Master Lift II that I could prefer because of the magnetically insured gueries." Yes, they have, and it is wonderful. 06-15-2018, ã, says 1606: 50 pm sola35; 5 I am not a router in a type of table saw. I prefer all my separate makers. That said, I would choose a table of cast iron router, whether alone either either on a table. I have a home made router table, but I did not use it since I got a modeler. I would also go with a about 52 "in the table saw since you have the room. If nothing else does it make a large stating area if you can keep it without pronouncing. I had a 52" and sold -The with the Serra Câmra with him. I now have a fence 26 "that is in my grizzly. I changed it and now I have about 33. 06-15-2018, ã, menses 1607: 41 pm jos 35; 6 if you are buying a router and elevator Anyway, check out the Triton-you can adjust your height through the base plate. It's worth looking at. 06-15-2018, ã, Mensse1608: 31 pm Sola35; 7 Thank you, Nick. It seems to be the consensus. . Certainly looks well. Thanks, Cary. If I go with the router in the table saw, I will definitely replace the wood / melamine by cast iron. In fact, this can be something that I do even if I decide to go with A router table alone. I just like the idea of theft and As far as the 52s are concerned. a. As soon as I get my tractor out of the shop and into its own shelter, the space will go be a problem. Bert, thank you for the reminder about the Triton. To be honest, I've never heard of triton before. © see April Wilkersons on YouTube. Then it seems I've heard about them everywhere- especially their routers. I'm sure they were much more popular in Europe and/or Australia? They seem to receive good and credible comments. I had been considering mainly Corporal Porter for the autonomous router engine, but also © I a m very curious about the router engine with the remote speed control that SawStop has just m a de available quite recently. I have an older Bosch 1613evs router and a new wireless Mikita router, but neither one of them would work in the elevator, so I have a project to modernize them. © ctrica to do in the shop before you let me take too much, but that didn't stop me from starting to get... Dean 06-15-2018, it's 21:40 PM \$358 haven't used any yet, so I can't say. I know that if you can get router speed controls on Amazon for about 20 bucks, however, I wouldn't worry too much about SS remote speed control. 06-16-2018,is 3:06 PM \$35;9 A router table built on a table saw © a great space saving for those who badly need space, but there are disadvantages in comparison to an autonomous unit. If there's room, there's no life... get separate station. Happiness is © how to wet the pants... everyone can see it, but only you can feel the heat... 06-16-2018, it's 19:45 PM 35;10 My router table © in itself an old replaced table saw, attached to my Unisaw, so also © I can use Uniferce on her. It's been like this during the past © Dead and I would never change it. It uses an old Stanley 3-1/2 hp router. "Anything seems possible when you don't know what you're doing" 06-17-2018, PM #11 I have a Bench Dog cast iron router desk and lift as the right wing on my desk saw. I like that. There are disadvantages to take into account - any router configuration limits the table saw after all. But for all this, given my spatial limitations, I think it's a highly viable setup. If I had the space, I would go alone, but as an amateur, don't lose enough flexibility to sweat. 06-17-2018, 9:04 #12 I use a molder Antique Delta as my outfeed, solid and heavy, and I have a router wing attached to it. I did my own (the bench dog was not around yet) but would use them if I did it again. The Incra fence is mounted on a 1/2 inch ply piece, and performed on the acaro slots using scale hardware. It's also the fence for my band saw Moak 26. The fence is very easy to attach and unplug --- if for some reason I need to pause the routing task to perform just one more cutting table saw is out and in a trice And keep the position perfectly. (And yes, that happens many times.) The router bit is not on the way to a saw cut of < 12". For those who look closely, my table saw, modeler, etc are on a pedestal of 5" as I like them a little higher. A single dust collection tube 6" connects to the space below. The table saw has a shark guard mounted on the head that is folded in the photo. Terry T. IMG_20180617_170743877.jpgIMG_20180617_180520779.jpgIMG_20180617_170842598.jpg Last edit by Terry Therneau; 06-17-2018 at 9:06 PM. Reason: spelling error 06-17-2018, 11:29 PM Thanks, guys. I appreciate feedback, experiences and ideas. I had the tractor yesterday and I was measuring it while I would have space for a separate router table, I am increasingly convinced that I will combine. I have 1/4 of the 900 square feet mounted with toolboxes and worktops. Another 1/4 has wooden racks around the perimeter that fit into the workspace a little. If I use the opposite corner as a layout table area, this means that the restng area will be reserved for thetable and possible off feeding table. Sprinkle in the room for a band saw and drill press and I'll start to get a little tight in space. Very much. room now, but I know it will fill up rapidly. Another question about the routing table. If I'm looking at the Dewalt, Porter Cable or Triton, I believe they are all speed control device since it is not compatible with the smooth boot circuit and varying speed on board these routers. So, Am I stuck changing the speed on the router itself on the time when a different speed is @ needed? It's @ much, except that it will be in an inconvenient place under the desk and inside a dust collection box. This is making the Jess Em router with the variable remote integral speed/switch off and umbilical look a little more appetizing. If I knew more about Jess's pedigree in router... Based on the quality but difficult to research. What I'm talking about Jess In © the Pow R Tek... Any ideas or information about where the router comes from? I'm trying to avoid paralysis by analysis, but I would like to do the right thing the first time. In the end, I'm just a hobbyist, so no skin lace producers out of my nose if I make a couple of less than perfect choices, but I'd like to minimize the 'DÃâ£l) In a few moments. I'm sure you all understand. Dean 06-17-2018, © 160; 11:52 PMJos35;14 If you have the room go with the 52nd Places. I don't use mine often, but it' good to have when you need it. I have two routers on my Unisaw. It in~~~venÂ' A' a good use of space in a crowded store.. (see photo). I'm not sure if they do anymore, but my Woodhaven fence just holds up to my Bies fence. It only takes a few seconds to assemble and works great on any lift. Attached Images Please Help support the creek. We can all agree that in 2015 not one person got the right answer to NAS 152; Where do you see yourself in five years? Excuse me, please. Please. The engine too © m m © known as the AUK engine made by Swiss technology in China and I doubt it has any connection with Switzerland! The first generation was a failure and was pulled out of the sale due to an ill-designed speed controller, but the present generation has no reported problems and is for sale for at least a year. You can use a CNC zone with VFD instead of a router engine, it has a much better working cycle, use er jackets, um © very quiet when compared to any router, the brake can be used to slow down the fastest router bit and the VFD control panel can be mounted above the table. In Aussie WW fans there is a current wire over CNC zone highlighted in WW popular a few years ago. Chris all I like © illegal immoral or fattening
