Nursing Care Plan for Premature Babies - These days we want to discuss the article with the title health Nursing Care Plan for Premature Babies we hope you get what you're looking for. We are here trying to make the best possible to provide information on this blog. Newborn infants with gestational age 37 weeks or less at birth is called premature babies. Although small, premature infants in size according to pregnancy, but the development of intra-uterine rudimentary, can cause complications during the post-natal. Newborns whose weight was 2500 grams, or less with a gestational age of more than 37 weeks is called small for gestational age, is different from the premature, although 75 % of neonates whose weight was below 2500 grams born prematurely. Clinical problems occur more often in prematurity system development and function, restricting the infant's ability to cope with the problem of disease. A common problem among others; respiratory distress syndrome (RDS), necrotizing enterocolitis, hyperbilirubinemia, hypoglycemia, thermoregulation, patent ductus arteriosus (PDA), pulmonary edema, intraventricular hemorrhage. Another additional stressor in infants and parents include hospitalization for illness in infants. Parental responses and coping mechanisms they can cause interference in the relationship between them. Necessary planning and adequate measures for these problems. Etiology and Precipitating Factors: Problems in the mother during pregnancy: Diseases / disorders such as hypertension, toxemia, placental abruption, cervical incompetence, multiple fetuses, malnutrition and diabetes mellitus. Low socioeconomic level and inadequate prenatal care. Preterm labor, or induced abortion. Abuse consumption in the mother, such as; drugs, alcohol, smoking and caffeine. Assessment 1. History of pregnancy. 2. Status of the newborn. 3. Physical examination head to toe, including: cardiovascular, gastrointestinal, integument, musculoskeletal, neurologic, pulmonary, renal, reproduction.4. Supporting data X-ray of the chest and other organs to determine the presence of abnormalities. Ultrasonography to detect abnormalities of organs. Stick glucose to determine glucose levels decrease. Serum calcium levels, decreased levels means there is hypocalcemia. Bilirubin levels, to identify improvement (due to premature are more sensitive to hyperbilirubinemia) Electrolyte levels, blood gas analysis, blood type, blood culture, urinalysis, fecal analysis, and so forth. Nursing Diagnosis 1. Risk for respiratory distress related to immaturity of the lungs, with decreased production surfactan that cause hypoxemia and acidosis. 2. Risk for hypothermia or hyperthermia related to prematurity or changes in ambient temperature. Imbalanced nutrition less than body requirements related to imadequate intake of calories, and lose calories, and lose calories. Fluid and Electrolyte imbalances related to immaturity, radiation environment, the effect fototherapy or loss through the skin or lungs.5. Risk for infection related to immunologic immaturity of the baby and the possibility of infection from mothers or medic / nurse.6. Risk for impaired skin integrity related to immaturity and fragile skin.7. Impaired sensory perception: visual, auditory, kinesthetic, gustatory, tactile and olfactory related to less stimulation or excessive in the intensive care environment.8. Knowledge Deficit (family) about treatment of the sick infant at home. Thank you for visiting our blog. In the future we continue to seek better in presenting good information. Don't forget to share the article Nursing Care Plan for Premature Babies this in social media. A checklist is a type of job aid used to reduce failure by compensating for potential limits of human memory and attention. It helps to ensure consistency and completeness in carrying out a task. A basic example is the "to do list".[1] A more advanced checklist would be a schedule, which lays out tasks to be done according to time of day or other factors. A primary task in checklist is documentation of the task and auditing against the documentation against the documentation against the documentation against the documentation against the documentation. [2] Applications A pilot of a DC-10 consulting against the documentation again check process compliance, code standardization and error prevention, and others. Often used in industry in operations procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and motions procedures In civil litigation to deal with the complexity of discovery and the civil litigation to deal with the complexity of discovery and discovery and discover of a risk management system being in place Used by some investors as a critical part of their investment process An ornithological checklists), a list of birds with standardized names that helps ornithological checklists (Category:Ornithological checklists), a list of birds with standardized names that helps ornithological checklists). tracking sports card collections. Randomly inserted in packs, checklist cards provide information on the contents of sports card set. The creation of equipment for a dive, and to ensure that the diver and life support systems are fully prepared before they enter the water. To a lesser extent, checklists are used by a minority of recreational divers, and by a larger proportion of technical divers during pre-dive checks. Studies have shown checklists to be effective at reducing the number of errors and consequent incidents. Health care used by a minority of recreational divers, and by a larger proportion of technical diverse pr practice guidelines are followed. An example is the WHO Surgical Safety Checklist developed for the World Health Organization and found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect on improving patient safety[4] and subsequently found to have a large effect of the large effect of the large effect the checklist mortality dropped by 23% and all complications by 40%, higher-quality studies are required to make the meta-analysis more robust.[6] However, checklist use in healthcare has not always met with success and the transferability between settings has been questioned.[7] In the UK, a study on the implementation of a checklist for provision of medical care to elderly patients admitting to hospital found that the checklist highlighted limitations with frailty assessment in acute care and motivated teams to review routine practices, but that work is needed to understand whether and how checklists can be embedded in complex multidisciplinary care.[8] Format Example checklist Checklists are often presented as lists with small checkboxes down the left hand side of the page. A small tick or checkmark is drawn in the box after the item has been completed. Other formats are also sometimes used. Aviation checklists generally consist of a system and an action divided by a dashed line, and lack a checkbox as they are often read aloud and are usually intended to be reused. Concern Excessive dependence of checklists should not be used as a replacement for common sense. Intensive training including rote-learning of checklists can help integrate use of checklists with more adaptive and flexible problem solving techniques. [citation needed] See also Look up checklist in Wiktionary, the free dictionary, the free dictionary. Check sheet - Form (document) used to collect data in real time at the location where the data is generated Checksum - Data used to detect errors in other data Task list organization the process of planning and exercising conscious control of time spent on specific activities Punch list, also known as snag list - Construction project document To do list The Checklist Manifesto: How to Get Things Right - 2009 book by Atul Gawande advocating the use of checklists References ^ alexpuscasu.
