Tower defence mod apk games

Everyone loves the Chrome dinosaur game—not the reason it appears, which happens when something goes haywire with your network connection and the web browser can’t load the site you were trying to reach—but it is a little fun and it helps pass the time while you wait for your network to fix itself your troubleshooting to rectify the problem.However, “little” doesn’t mean “endless,” and even the most ardent of gamers will eventually get bored hitting the space bar and hopping over cacti as your dinosaur runs through a lovely desert. Enter Dino Swords, a collaboration between MSCHF and 100 Thieves that adds a bit more spice to Google’s simple Chrome game. Your dinosaur does the same thing in this version as the other—hopping over cacti. But he has an arsenal this time around. To be specific, the Dino Swords game gives your little creature 26 different weapons and items you can use to avoid cacti by mowing your way right through them. Or, depending on what you grab, you can even enable crazier effects like slowing down time. The items aren’t unlimited, in the sense that you can’t just take out your handgun and blow the desert to pieces for thirty minutes. However, they are plentiful; I haven’t unlocked all of the items yet, but I bet I could if I didn’t have other things to do at the moment.Don’t let my absentmindedness keep you back from some solid desert-jumping, however. Stick with the game for the next week, and you could win some solid prizes for your cacti avoidance:Who doesn’t want some baller dinosaur prizes? Here’s hoping you don’t get a tiny little cactus in the mail as an “exclusive Dino Swords prize.” Unless said cactus has a crisp \$100 bill (or a few) pinned to it, if so, I have no problem wasting my whole weekend jumping around. What else is one to do in a quarantine? Tower Defense games were one of the first genres on mobile to really capture the mobile gaming audience. The biggest reason is because the games almost exclusively feature simple tap controls. Thus, the controls are extremely well suited for touch screens. The genre saw a renaissance on mobile years ago. It’s slowed down quite a bit and some classics in the genre like Anomaly got left behind due to a lack of updtes. However, there are still new tower defense games every year. Here are the best tower defense games for Android.The Bloons TD series is one of the most popular and successful tower defense franchises on mobile. The latest one, Bloons TD 6, launched in 2018. It features 20 maps, tons of upgrades, 19 towers, three upgrade paths, offline support, new game modes, and more. Of course, previous iterations of the game have their charms as well and some of them still get updates. It’s nice to see companies still taking the genre seriously even years after it hit its second renaissance. Bloons TD 6 (and previous games) are solid tower defense games for reasonable prices. Defenders 2 is a tower defense and card-collecting hybrid. You unlock various towers and such by collecting cards. The things you unlock are usable in the game. The freemium aspect should be fairly apparent. However, this game can pump out a few dozen good hours of play before it starts bothering you for money. It features a total of 40 towers, 20 spells, 29 bosses, and even PvP. This one has a bit of a bad endgame thanks to microtransactions, but the initial experience is quite good. Defense Zone 3 is the latest of a popular series of tower defense games. It features a lot of the mechanics from the prior two games along with some new stuff to freshen things up. It also features several difficulty modes, eight kinds of turrets, special battles, and support for 20 languages. In addition, the game leans a bit on its difficulty settings so you can find a difficulty no matter your experience level. The graphics are also pretty good. This one is a bit older, but it’s still quite good. DigDefender is a fun take on the tower defense genre. Each level gives you a basic map. You’ll then have to dig your level out yourself and defend the path you dig. The game features 70 levels, a survival mode where you can challenge for leaderboard supremacy, achievements, and a variety of upgrades. It also boasts no pay walls or wait timers so you can play as much as you want. It’s one of the most underrated tower defense games out there. Element TD is a newer pay-once tower defense game in a genre that is quickly being overtaken by freemium titles. It features simple graphics and a fairly standard premise. There are maps, you lay down towers, and hope they can get the job done. There is an elemental mechanic where the elements you choose determine which towers you can lay down. That helps provide an extra layer of challenge. There are also 44 towers, 50 different bad guys, 30 achievements, and five difficulty settings. It’s a solid overall game and it’s worth a shot. Grow Castle is one of the interesting tower defense games. This one gives you an actual tower that you must defend. It can be stocked with a selection of heroes that do the defending. There are 120 heroes, Each one has its own powers to shape the context of the game. The game also features a ranking system, guilds, and more. It’s a freemium game. That’s probably the thing we like least about it. It is a fun play, though. Infinitode is a minimal tower defense game with fairly simple graphics. The minimalism of the game allows you to build like a madman and boasts the ability to create 1000 towers at once. As you can imagine, the maps are gigantic and there’s a map editor so you can have some fun. Every level is endless, there are global updates during games that change the situations, and more. The game is one of the more unique games we’ve seen. It’s also great for those who love only the most chaotic tower defense games. It’s free to download with in-app purchases. However, the developer states in the description that you should be able to unlock everything without buying anything. Price: \$4.99 with in-app purchasesIron Marines is the latest tower defense game from Ironhide Game Studio. We also have their Kingdom Rush franchise a bit further down. This one is among the newer tower defense games. It features 14 campaign missions, ten additional special missions, and an Impossible Mode for additional challenge. There are also a variety of towers and heroes. They are unlockable and upgradable. It comes complete with achievements and more. It’s \$4.99 with in-app purchases. This one is also available on Google Play Pass if you use it. Price: \$0.99-\$4.99 with in-app purchases (each)The Kingdom Rush series is one of the most prolific and highly rated tower defense franchises on the list. It adheres strictly to the classic tower defense mechanics which has garnered it a tiny bit of vitriol from more serious gamers, but most people still really enjoy these titles. There are four total, including Kingdom Rush, Kingdom Rush Frontiers, Kingdom Rush Origins, and the newest title, Kingdom Rush Vengeance. They all have similar mechanics with small mechanic changes as you progress through the series. The first Kingdom Rush game is free with no in-app purchases which makes it a great jumping in point. The entire Kingdom Rush series is also available on Google Play Pass. Knightfall AR is one of the more unique tower defense games on Android. It’s an AR game and you play it through your phone camera on a flat surface. You play as a group of Templars defending the Holy Grail from intruders. It uses Google’s ARCore technology so your phone needs that in order play this game. In addition, the mechanics are decent and there is a photo mode for more fun goodies. The game is entirely free but it’s also exceedingly short. It also serves as a fun proof-of-concept for AR gaming. Myth Defense is a family of pay-once tower defense games for those who dislike freemium. The basic mechanics are purely tower defense. It also adds things such as random maps, alchemy, and more. There are 18 maps in the campaign mode, two difficulty levels, 22 towers (along with three traps), 33 total levels, and support for multiple languages. You can also play both difficulties at once with each one having its own save file. There are two games in the series (Myth Defense LF and Myth Defense 2) and both them are relatively inexpensive. They’re worth a shot. Both games are available on Google Play Pass as well. The Plants vs Zombies games are arguably the most casual gamer-friendly tower defense games on the list. It doesn’t look like your classic tower defense but the mechanics are there. You must defend against waves of enemies by planting weaponized plants in your yard to obstruct their path. It’s long been one of the most popular tower defense games. Additionally, it’s a fun game and it’s great for casual gamers. The developers have also been consistent with adding in new content for those who have reached the end of the game. Plants vs Zombies Heroes is also decent if you want a card game spin on the game mechanics. Radiant Defense is easily the most colorful tower defense game on the list. It also features some rather unique mechanics. Players build their own routes and then line that route with towers. This is in stark contrast to the standard where the developers make the paths for you. It adds an extra layer of strategy on top of an already above average tower defense experience. It’s a bit short with only about 15 missions. However, the game is also quite inexpensive. Swamp Attack is a tower defense game with a goofy, southern theme. It plays a lot like Plants vs Zombies. Bad guy waves come in from the right side and a hick with a gun battles them off from the left side. You get a bunch of weapons, some decent strategy elements, and 390 single player levels. That should keep you going for a while. Players also tap the screen to shoot weapons so there is an element of control here as well. It’s a free to play game, but it really only affects the endgame experience. Thing TD is our wildcard pick for best tower defense games. This one features a narrative story line, over 50 enemies, eight heroes, 25 levels, and 60 achievements. That is a decent amount of content for this genre. The mechanics are typical tower defense. You lay defenses along a path and prevent bad guys from reaching the end. It gets quite difficult as you progress, but this is good, classic tower defense fun with the usual free to play price tag. Skip To Content So often in games, it’s the player who is forced to navigate and survive the obstacles put in their way. We fight, shoot, jump, and slash our way through all the enemies and traps the designers lay out for us as we make our way to the goal. It is much less common where we get to be the ones designing the gauntlet of dangers that our enemies must pass through. The one genre that really capitalizes on that strategic fantasy is tower defense games. Somewhere between an RTS and a management game, tower defense titles are some of the most addicting games there are — when designed right. Something about watching a line of enemies get mowed down by your perfectly-placed and organized traps, turrets, and special abilities is endlessly entertaining. The basic concept has been expanded to cover all types of art styles and themes and to integrate other genres. The genre is nearly flooded with titles, most of them good, but we’ve picked out the best tower defense games to sink your time into. Further reading Bloons TD 6 (iOS, Android, PC) The Bloons series is an interesting one to look back on. What started out as a little Flash game where you played as a monkey throwing darts at balloons in a sort of prototype Angry Birds-style game has spun off into a series of downright fantastic tower defense games. The first two games in the series were free browser games, but starting with the third entry, they also started appearing on mobile marketplaces, up until the latest entry, Bloons TD 6. This is the first game in the series to feature 3D graphics and not have a browser-based counterpart due to Flash no longer being supported on web browsers. The basic format is the classic tower defense style, where you build towers to try and stop waves of balloons, or bloons, as they’re called, from reaching the end of the track. Some bloons are immune to certain tower types, like fire or magic, and become progressively stronger over time. Towers can be upgraded in three different branches, and a special hero tower will automatically upgrade itself. Each map offers its own challenges, and new modes can be unlocked on each one completed. It has gotten plenty of updates and support, making it one of the most popular and successful tower defense games around. Plants vs. Zombies (iOS, Android, PS3, PS Vita Xbox 360, DS, PC) The later games in the series have taken the concept of plants fighting off zombies into the third-person-shooter space, but the original Plants vs. Zombies was one of the first major mobile gaming hits. It drew in tons of players with its simple concept, easy-to-pick-up mechanics, and charming art style. Unlike other tower defense games, PvZ is lane-focused rather than having enemies follow a track. Plants can be placed on specific squares on the grid, and zombies walk in straight lines along those gridlines from right to left. That alone makes it easy for even casual players to pick up and play. The difficulty and complexity do ramp up as new types of plants with unique properties are added and the zombie waves become more overwhelming. With such limited space, knowing what type of plant to prioritize becomes an integral part of the game. Each level calls for new strategies, and the game is great about keeping you on your toes and never falling into a single strategy that works on each stage. Other modes like the puzzles, zen garden, and survival complete an already-excellent offering. Defense Grid 2 (PS4, Xbox One, Switch, PC) The first Defense Grid was a cult hit on the PlayStation 3 and 360-generation consoles. It launched in the early days of tower defense games being on consoles and was highly-rated for a project with such a limited budget and low price tag. The sequel, Defense Grid 2, was able to use that goodwill and launch a successful Kickstarter to bring the game to the next generation of consoles. It is one of the more standard tower defense games, but that works to make it functional for console players using controllers. The setup is simple. You build towers on levels with unique paths, restrictions, and enemies to stop waves of aliens trying to steal your power cores. If an alien reaches the core and escapes, its game over. Different aliens have different strengths and weaknesses, so having a variety of towers is key. Other standard features, like upgrading and selling towers, are all here but with a bit more of a narrative to keep you engaged throughout each level. Orcs Must Die! 3 (PC) The first major departure from a typical tower defense game is the newest entry in the series, Orcs Must Die! 3. This series stood out from the beginning by combining the genre with a third-person perspective. Rather than playing as a disembodied force overlooking the action, you take control of specific characters with their own weapons and abilities to fight off waves of orcs. Paths work the same as a traditional tower defense game, but being on the ground level gives the entire experience a much different feel than any other. Orcs Must Die! 3 focuses more on traps than towers, which makes sense given the perspective. You can lay down spike traps, launch pads, wall traps, fire traps, and many more. You’re meant to synergize these traps together into combos that wear down the orc’s numbers — or just slow them down enough — for you to clean up the rest. Being able to directly contribute to the action is a great change of pace, and the light and comedic tone of the game keeps it fun. Co-op is also a major focus and will have you coming back to challenge levels time and time again. Free with Stadia Pro Kingdom Rush (PC, iOS) Just like Bloons, Kingdom Rush evolved from simple beginnings as a Flash game to one of the best and widespread tower defense games of all time. It uses a simple medieval time period and inviting visuals, plus some of the most simple mechanics yet. Monsters will follow the clear path that you must build towers on to save your kingdom. There are just four basic towers, eight special towers, and 18 abilities to apply and upgrade your towers with. The campaign takes place over several distinct locations and backdrops, with over 30 enemy types and even boss battles. You can even summon ground troops in addition to building towers as another tool to fight off the forces of evil. Plus, if you enjoy the style and systems of Kingdom Rush, there’s plenty of it to enjoy. Aside from the base game, there are also Kingdom Rush Frontiers, Kingdom Rush Origins, and the upcoming Kingdom Rush Vengeance. OTTTD: Over The Top Tower Defense (Switch, iOS, PC) Of all the takes on the tower defense genre, Over The Top Tower Defense is the one that fully embraces the chaos that these games are built on. Rather than just whittle down enemies until they vanish, OTTTD lets all the blood, guts, and limbs fly across the battlefield as your turrets rip apart increasingly weird and absurd interdimensional creatures. Aside from the 12 tower types you can use in traditional tower defense fashion, you also pick from seven hero classes to make a squad of three. Each one can level up in an RPG-style system to unlock new active and passive skills, plus earn new weapons and armor. The setup is as over the top as the presentation. In 2136, a company named HEROCORP is tasked with defending the Earth against invading dimensional creatures by invading them first. OTTTD is a hodgepodge of tower defense with MOBA mechanics and Starship Troopers with a little Rick and Morty thrown in. Somehow, that combination ends up making a fantastic game. Dungeon Defenders II (PS4, Xbox One, PC) Dungeon Defenders II was a very early free-to-play title on the PS4 and Xbox One consoles and, like Orcs Must Die! 3, focuses on the hero aspect of the genre more than towers. Of course, you will still be building defenses, but this is done between rounds. When the thieves, wizards, robots, and other enemies start invading, the game is more of a traditional third-person action game. There are 12 heroes to pick from, and they all have their own playstyles to learn. Bringing in even more outside influences, Dungeon Defenders II also emphasizes loot. During games, you will pick up new weapons and items to upgrade your hero with in addition to resources to make new towers. This is another game best played with friends, which is easy since the game is free and is still being worked on and updated to this day. If you enjoy the loop of building, fighting, looting, and repeating, this is one tower defense game you can sink a ton of time into. Play Dungeon Defenders II free Sanctum 2 (PS3, Xbox 360, PC) Described by the developers as the sequel to the “world’s first Tower Defense/FPS hybrid,” Sanctum 2 may be aging a bit graphically but is just as fun as ever. It was really only a matter of time before a team put you right in the action by combining one of the most popular genres there is, first-person shooters, with the strategic nature of a tower defense. That does make it the least approachable entry for casual players who come to the genre for a more slow-paced or puzzle-solving type experience, but it’s perfect for anyone who wants to spice up their action with some extra mechanics. The game still relies on the player building mazes filled with turrets to deal most of the damage to the waves of enemies, but it also uses elements from modern shooters. You pick from a set of classes, customize their loadout and perks, and jump right into the action. The game was built with co-op in mind, and even with a team of four, it’s still very challenging. Strong coordination is key, but being able to personally correct for some strategic mistakes on the fly with strong shooting makes it feel like you have a bit more control than other games. PixelJunk Monsters 2 (PS4, Switch, PC) In a strange turn for the PixelJunk series, the developers decided to make a sequel to the first PixelJunk Monsters game 10 years later as opposed to continuing the trend of each game tackling a new genre. That just goes to show how popular the tower defense genre has become, and the return of this style of game was very welcome. PixelJunk Monsters 2 doesn’t try and reinvent the genre or combine it with another to stand out from the crowd but instead focuses on making the most refined and polished tower defense experience possible. Set in a visually delightful world of colors, creatures, and environments, the sequel sticks to the Polynesian-inspired style and characters that are so rarely seen in gaming. In terms of gameplay, you pretty much know what to expect if you’ve played any other standard tower defense game. You select a level, build your towers, and do your best to hold off waves of enemies on their way to a hut you’re trying to defend. You do need to manage a Tikiman to go collect the spoils from fallen foes without getting into danger himself. That extra element is just enough to keep you engaged while your turrets are doing all the work instead of just sitting back and waiting for waves to end. Editors’ Recommendations
